Individual Assignment 4

Total: 5 points

1. Utilize the Hollywood dataset that we've utilized in class to formulate queries that extract the following information. Your queries should directly yield the answers in only ONE execution. If an additional step (e.g., manual row counting) is required to obtain the answer after running a query, the query won't be considered correct for the question. Copy and paste both your queries and the resulting table or single value to a Word document, then upload it to Blackboard. Write queries to extract the following information:

   a   What is the average RottenTomatoes Score for the movies produced by Disney?
   b   Calculate the difference in profitability between the most and least profitable movies created by FOX.
   c   Present an unduplicated list of lead studios that have produced comedy movies.
   d   How many lead studios have produced at least one movie?
   e   Which lead studios produce the most movies?

-the end-
